**Asia**

404-A, Skylark Building  
60-Nehru Place  
New Delhi 110019, INDIA  
Tel:+919941606500  
Fax:+919966605708

LandTech has developed a new very effective geophysical method for application in **environmentally sensitive regions** such as rainforests, swamps, national parks etc. It is based on its specifically developed passive seismograph and sensitive seismometer which can record naturally occurring microearthquakes with magnitudes below than 0.1R! Then by a neural network based patented methodology it can provide high resolution 3D Vp, Vs and Poisson's ratio images with lithological interpretation. So next time that you plan a 2D or 3D survey in the rainforest ask for our services first. **And all this at a cost similar to the cost of a gravity survey!**
